

Precautions

- Secure the wood tightly in wooden vice.
- Handle tools with care.
- Keep the floor area free from obstruction.
- Never wear loose clothes.

Q/A

Q. What is the factor which governs the selection of timber for particular use?

The various factors are:

- Density
- Durability
- Termite resistance
- Wood type
- Trade name & cost

Q. Classify different types of joints used on wooden marking?

Lengthening joint: Used to join wood along its length.

Gliding joint: Used to create wooden panels.

Framing joint: Used for right angle joints.

Angular joints: Used for corner angle joints.

Q. What do you understand by seasoning wood?

Seasoning is the process of reducing the moisture content of freshly cut timber to prevent shrinking, warping & cracking. It improves the wood's stability, strength and durability.
