

Welding Shop

Experiment - 2

Objective :

- 1) To study gas welding process, different types of flames, filler metal and flux etc
- 2) To join two pieces of a given metal by gas welding method

Job Assignment

- To sketch gas welding set, and equipments used
- To sketch different types of flames produced
- To cut specimen of given dimensions by gas cutting
- To make different joints like lap joint

Tools and Instruments

Wire Brush:

It is used for cleaning the material before welding and removing impurities after welding

Tongs:

It is used to hold the heated material

Cylinder Key:

It is used to open cylinder

Welding torch:

It is a device used for the mixing acetylene and oxygen and control gas flow.
