Q3) How do you select shape, size and grade of files?

The coarser the cut of the file, the rougher the finish of the work. Therefore the work size of the file and the grade its cut must be taken into account against the amount of stock to be removed and finish that is required.

Q4) Difference between cutting and chipping by a chisel

Cutting

Removing material along a straight line or edge to separate a piece into two pieces

Chipping

Remove excess or unwanted material in small pieces to bring the job to the required shape or finish

Q5) What is the role of punch mark in marking a job?

→ It provides a permanent reference point on the metal surface, ensuring the markings don't get erased during machining or handling

→ It helps in accurate positioning for drilling, cutting or fitting operations
